

Magister
Sistema Caffè

TECHNICAL FEATURES

- Brewing machine with volumetric dosage and microprocessor electronic control with display.
- Mirror finish AISI 304 - 18/8 stainless steel body.
- Digital clock on display with electronic programmer to switch the machine on and off.
- Coffee brewing control panel plus continuous brewing switch - stop switch and hot water brewing switch for tea.
- Electronic water heater level check with protective device which is activated when the water tank is empty.
- Volumetric pump with built-in balanced by-pass.
- Electronically controlled cup heater fitted as standard.
- Electric heating with safety thermostat.
- Hot water pipe with programmable dosage.
- Two steam pipes.
- 220 / 240 Volt 50 / 60 Hz electric power supply
- 110 / 120 Volt 50 / 60 Hz electric power supply *upon request*
- Hot water mixer *upon request*
- Kit for paper pods and plastic pods easily changed for application to the standard brewing group *upon request*
- Application of automatic cappuccino group *upon request*

FINISHES

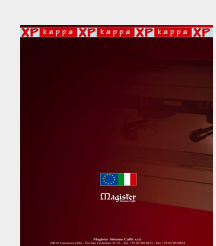

In-depth engineering research together with prestigious design, create a pleasant, unique and attractive context which makes the coffee machine an item

which is built to the state of the art, combining attractive aesthetics with practical and functional use, to assist the work of the operator.

CONTROL PANEL

The elegance and shine of mirror finish steel provide the base for the rear lit soft-touch controls on the new console, which is fitted in a comfortable, ergonomic position.

3 Groups

Size: 540 • 1030 • 520 height
Boiler capacity: 17 lt. • Power Watt: 6.000

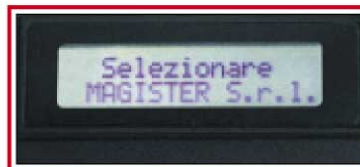

Rear lighting enables safe identification of the electronic controls even when the machine is used in shadowed areas or under dim lights.

The extreme simplicity of identification of the symbols, created using laser techniques, the perfect insulation of the electrical part, harmonious engineering and design make the control panels attractive, functional and safe.

DISPLAY

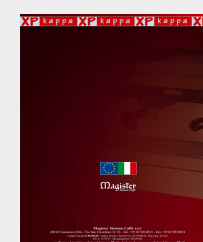

A valid aid for the operator and efficient indicator for servicing assistance, the display provides a practical link between the functions of the coffee machine

and its users. With appropriate regulation, the coffee machine can be customised to satisfy the user's requirements and the display makes it possible to control and check operations. The built-in electronic system enables:

- Automatic switching on and off of the machine.
- Automatic engaging of the cup warmer.
- Overall or button-by-button count of coffee and water brewings.
- Request for maintenance operations.
- Request for resin and water softeners.
- Machine management (*credit*). and fault signals (*alarms*).

PRE-INFUSION GROUP

The **Magister** brewing group with control solenoid with seals made of synthetic ruby, is engineered to enable safe operation over a considerable period of time without incurring faults.

Its optimum dimensions enable maintenance of the right balance, whether the coffee machine works constantly or occasionally, even with prolonged intervals between one operating period and the next.

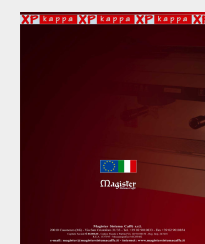

The **Magister** group can be fitted with a pre-infusion system to enhance the extraction of the precious and aromatic substances in the ground coffee blend.

The brewing group can easily be adjusted and prepared for the use of paper or plastic coffee pods with a special kit.

TAP

The tap is strongly built and safe and is equipped with a safety system to prevent the return of liquids into the water heater. The control knob, which is manufactured using the double mould technique, facilitates gripping and the work of the operator.
